

#### **IRISH CATTLE BREEDING FEDERATION**

#### "Application of Genomic Selection in Dairy and Beef Cattle in Ireland"

Dr Andrew Cromie, Technical Director ICBF.

Department of Agriculture, Food and the Marine An Roinn Talmhaíochta, Bia agus Mara

## **Understanding Ireland!**

- · Ag-food is important.
  - 7% GDP, 10% employment.
  - Export focused (80%)
    - Population of 4.5m but producing enough food to feed 35m.
- · Cohesive industry.
  - DAFM, ICBF, Teagasc....
  - Harvest 2025; Sustainable Growth.

## Irish Cattle Breeding.

- · Co-ordinated by Irish Cattle Breeding Federation (ICBF).
  - A co-operative of 30 cattle breeding organisations (AI, Herdbooks & Milk Recording organisations) & 2 Farm Organisations.
- Established the ICBF central database in 2002.
  - Now the cornerstone of the Irish cattle industry.
- Focused on "profit from science".
- High level of farmer trust independent genetic evaluations are key.
- World-leading (research => implementation).
  - 2<sup>nd</sup> in world to launch dairy genomics, after US.
  - Beef Genomics => largest livestock genomics project globally.

## IDB Chip – The database in 54k SNP's!

#### IDB SNP CHIP INTERNATIONAL DAIRY & BEEF SNP CHIP

Designed in association with the Irish Cattle Breeding Federation (ICBF), Teagas Weatherbys and USDA's Agricultural Research Service.

- The International Dairy & Beef Chip.
- Developed in Ireland, with Illumina. Currently on v3.
- 54k SNP's.
  - 40k core, 6k for better imputation, 7k for "regions of interest" & 1k for major genes/defects.
- 160 Major genes/defect.
  - Database will drive this.

Typical Irish dairy farm; 100 cows, calving from mid-Feb (in line with grass growth in Spring) and ending lactation by mid-December.

### Where we started; Irish dairy herd 2000

Pregnancy to first service for both groups was just 35

This year's fertility results

#### Very disappointing results from three year trial

EIGHT of the twenty-three empty cows were scanned in calf at 30 days. Embryo loss struck to see the eight repeat near the end of the breeding season.

That's is the hardest pill to swallow for Jack Kennedy, Flor Flynn and the rest of the team that put in huge effort into getting the cows in calf. "It was hugely disappointing. The cows were well fed since they went out day and night on March 10, and they settled very well,"

said Jack. There was just one embryo loss last year. The biggest problem for them, and for all farmers, is that there is still little known in terms of answers.

Feeding more meals is not the solution. The three-year trial clearly shows that there is no effect of feeding level on fertility.

The 96 cows were spilt into three herds. Each herd contained half-high genetic merit cows (RBI 00 X) and half-

UVLI AUU M

Medium merit (RBI 00 y). The herds were fed either

 400kg meal (Low concentrates, LC) 800kg meal (medium concen-

trates, MC) 1500kg meal (high concentrates

HC)

The average infertility rate for the different levels of meal was 23 per cer 25 per cent and 22 per cent respecti

swer for helping to select cows with higher fertility.

These cows were bred in Ireland and bought from farmers. The previous high merit cows had been bought in from Holland and France.

"However it shows that nationality has nothing to do answei with it. The results clearly show that poorer fertility is allow t linked to high index Holstein spread percentage, in the cows

	Curren (1998-	t trial 2000)	Previous trial (1995-1997)			
24-242.5°C	HGI	MGI	HGI	MGI		
Submitted in 1st 3 weeks (%) Calving to service interval (days)	88 77	90 77	70	71		
Calving to conception interval (days)	93	90 57	86 41	88 53

Services/cow	1.83	1.68 12	1.75 23	1.7		
Percentage Holstein (%)	80	60	92	52		

Table 2

#### Measures of fertility needed in index

IRISH farmers desperately need an Index that in measures of fertuicy

The Moorepark research increases the urgency of the new index being drawn up by the ICBF and due to be released in late November.

For the first time the index will be produced that will include traits linked to fertility.

"Other countries are starting to record traits that are linked to fertility. With our compact calving system the need in Ireland is much greater," said ICBF geneticist Dr.

infertility.

Milk proc	luction for medium cows (1998-20	n and high meri 100)				
	High merit	Medium merit				
1998	1,498	1,213				
1999	1,675	1,464				
2000	1,770	1,564				

## Evolution of the EBI (2000–2017)

## Genetics Works; Example EBI

2017. Next Gen Herd

#### Genetic Trends in EBI (1996 - 2015).

### What has happened as a result of EBI

## Next Gen Herd Fertility Performance 2013-2016

	Elite	NatAv	Sig
Submission rate (%)	92	86	<0.05
Pregnancy rate first service (%)	60	46	<0.001
Pregnancy rate first 6 weeks (%)	73	58	<0.001
Final pregnancy rate – 12 weeks (%)	92	81	<0.001
Calving to conception interval (days)	76	81	<0.05
No. of services	1.57	1.77	<0.01

The Irish Agriculture and Food Development Authority

## Impact; ICBF Active Bull List (Top 75 available AI bulls ranked on EBI).

#### Typical Irish beef farm; 25 cows, calving in Spring, producing 1 weaned calf/cow/year. Part-time farming.

### Where we started; Irish beef herd 2017

### GHG; Beef Cows are a real problem!!

## We all need beef cows.

- Suckler cows & beef cattle are a key part of rural infrastructure, especially in Ireland
  - Small fragmented farms, marginal land etc.

## Innovation; Another Approach!

## Food Wise; Smart & Green.

- Apply the latest DNA technology to support an important indigenous industry
- Simultaneously addressing global challenges around GHG and food security

Agriculture, Food and the Marine

Talmhaiochta, Bia agus Mara LOCAL ROOTS GLOBAL REACH Food Wise 2025 A 10-year vision for the Irish agri-food industry

## The Irish Beef Genomics Scheme.

- Focused on breeding more profitable, sustainable and carbon efficient cows.
- Funded from EU Rural Development Program.
- €300m total funding 6 years (2015-2020)
  - Farmers paid ~€90/cow/year to complete key actions re: the scheme.
  - ~1.2m animals genotyped to-date. ~2.5m animals in total will be genotyped during period of scheme. Cost of genomic service is €22/animal.
- Building Ireland toward DNA based calf registration (& increased genetic gain).

### BDGP Data Recording; Farmer data

Information Collected

- Pneumonia
- ality
- Reason

- ~600k records/trait/year (cow & calf).
- Excellent heritability estimates, e.g., docility @ 30% with rg of 0.85 with data from "expert" scorers.

## €uro-Star Replacement Index.

Goal	Relative wt
Less	16%
Less	18%
More	21%
More	18%
More	23%
More	4%
	Goal Less Less More More More More

• The ideal Irish beef cow; A weaned calf every year of good weight & quality.

## 5 star cows are more profitable & more carbon efficient.

Stars	Repl Index	Cow Wt	Calf wean weight.	Calving Interval	Progeny carcass wt	Co2 Output
5 Stars	€108	669 kg	336 kg	403 days	358 kg	3,355 kg
4 stars	€86	680 kg	324 kg	407 days	356 kg	3,432 kg
3 Stars	€60	690 kg	319 kg	411 days	356 kg	3,475 kg
2 stars	€43	691 kg	315 kg	416 days	357 kg	3,502 kg
1 Star	€12	739 kg	309 kg	423 days	357 kg	3,552 kg

- Compared to 1 star cows, 5 stars are;
  - more profitable, sustainable & carbon efficient
     (+€100/cow). Cows that will produce more from less
- How do we generate more 4 & 5 star cows?

## Genetic Trends in Beef Profit.

Year of first calving

## Ireland & Turkey - Opportunities.

- Export of semen from high genetic merit Al sires for use in Turkey.
  - 150k units/year.
- $\cdot$  Export of live cattle.
  - 20k male weanlings for slaughter in Turkey.
  - 3.5k females for breeding.
    - 1200 of these are genotyped with 70% of these 4&5 star!

horns

## What should Turkey do next?

- Embed the technology => key focus of todays conference.
- Establish infra-structure to deliver the potential of genomics.
  - Database, genotypes, training population, genomic evaluations.....
  - Govt & industry must work together.
- Build your own indigenous livestock breeding program to support the growing needs of your country.
- · Work with partners to help you achieve this.

## Summary.

- Agriculture is undergoing a DNA technology revolution.
- Ireland is at the front edge of that revolution.
  - Strong partnership between ICBF, DAFM, Teagasc, cattle industry & farmers is allowing this happen.
- Genomics works. It will have a major role in addressing global challenges around environment and food security in the future.
- Great opportunity for Turkey to initiate large scale genomics based breeding programs in the future.
  - Disruptive yes, but allows you start very quickly.

# Thank You.
