This User Guide is aimed at helping you make full use of your Dairy HerdPlus membership. The HerdPlus service will furnish you with the breeding and management tools you need to maximise profit on your farm.

Understanding the Economic Breeding Index (EBI)

What is EBI?

EBI is a single figure profit index aimed at helping farmers identify the most profitable bulls and cows for breeding dairy herd replacements. It comprises of information on seven sub-indexes related to profitable milk production.

2018 Economic values and % emphasis for traits in the EBI				
Sub-Index	Trait	Economic Weight	Trait Emphasis	Overall Emphasis
Production	Milk	-€0.09	8.9	34%
	Fat	€2.08	7	
	Protein	€5.58	17.9	
Fertility	Calving Interval	-€12.59	23.1	34%
	Survival	€12.43	10.7	
Calving	Direct Calving Difficulty	-€4.19	3.3	10%
	Maternal Calving Difficulty	-€2.31	1.8	
	Gestation Length	-€7.93	4.3	
	Calf Mortality	-€2.58	1	
Beef	Cull Cow Weight	€0.15	0.7	8%
	Carcass Weight	€1.38	4.8	
	Carcass Confirmation	€10.32	1.7	
	Carcass Fat	-€11.71	1.1	
Maintenance	Cow Liveweight	-€1.65	6.3	6%
Management	Milking Speed	-€0.31	2.5	5%
	Milking Temperament	€35.86	2	
Health	Lameness	-€72.47	0.7	3%
	SCC	-€43.49	1.8	
	Mastitis	-€82.65	0.8	

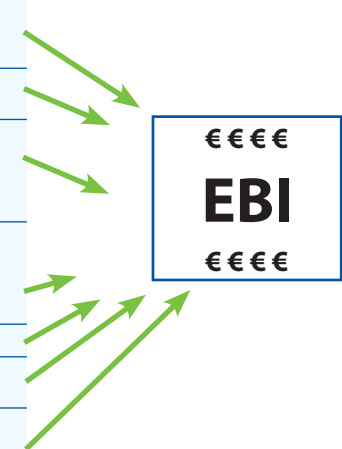

Table 1 Economic values and % emphasis of the various traits in the EBI formula (December 2017 figures)

How do I interpret the Predicted figures for Milk kg, Fat kg, etc?

An animal's Predicted Transmitting Ability (PTA) indicates the amount of a particular trait an animal is expected to pass on to its progeny relative to the base population (See Table 2). The PTA is equal to half of its own Breeding Value since a cow only passes on half her genes to her offspring. All values on the EBI report are expressed as PTAs. Information on bulls (in catalogues, bull search etc.) is also presented in terms of PTA.

	Milk kg	Fat kg	Prot kg	Fat%	Prot%	CI days	Surv%
Base Cow Performance	5743	224	195	3.90	3.39	400	82.5

Table 2 Base Population Performance – 2005 born cows, calved and milk recorded in 2007.

The daughters of a bull with a PTA of 150kg for milk yield would be expected to produce, on average, 100kg more milk per lactation than the daughters of a bull with a PTA of 50kg if their dams have equal genetic merit. This logic applies across all PTA's. The actual difference will not be exact for comparing individual daughters because no two daughters get exactly the same combination of genes and are not exposed to exactly the same environment. Thus, daughters of the same sire may have varying performance.

***Note:** EBI figures are subject to change after each evaluation run. See **Publication Schedule** online for evaluation timeline.

Getting Started

Logging In

To access your HerdPlus account:

1. Go to **www.icbf.com**
2. Under Online Services enter your username (your Herd number) and password.
3. Click Log in.

ONLINE SERVICES

Profiles

C.O.W. is a decision support tool for dairy females to aid in **management** and **culling** decisions through measuring the performance of cows within your herd.

C.O.W. is the expected profit of a cow for her remaining lifetime. Cows are listed in order of expected profitability. Suitable culling candidates will have the lowest ranking.

Record essential data to improve the accuracy of your herd's C.O.W. e.g. dry-offs, serves, health events.

C.O.W. instantly re-ranks as new data is recorded.

Record Events					
Missing Sire	Heat & AI/Serve	Pregnancy Diagnosis	Dry-Off	Mastitis & Lameness	Mark For Culling
0 Missing	89 Cows Served	53 Cows Scanned 7% Empty	3 Cows	0 Mastitis Case(s) 0 Lameness Case(s)	1 Cows Marked

7	2132		1	2633	273	1324	936	213	28-JAN-18	IN CALF	26-FEB-19	NO	24
8	1910		2	2607	402	1273	832	211	06-MAR-18	IN CALF	07-FEB-19	NO	35

Compare your top vs bottom cows on C.O.W.

38	151		4	494	-69	-55	617	96	23-JAN-18	IN CALF	04-FEB-19	NO	259
39	16		6	340	-397	125	611	92	09-FEB-18	IN CALF	21-DEC-18	NO	334
40	488		1					148	23-JAN-18	EMPTY		NO	347
41	90		4					95	27-JAN-18	EMPTY		NO	215
42	251		3					157	30-DEC-17	EMPTY		NO	264
43	1137		4					31	28-APR-18			YES	189
44	23		6					40	06-FEB-18			YES	302

Animals that are “Marked for Culling” or “Empty” are automatically ranked at the bottom.

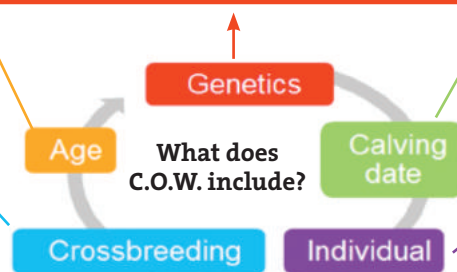

Young cows are not at their mature capability. Older cows will be more susceptible to health issues and are more likely to drop out of the herd compared to their younger herd mates.

The Predicted Transmitting Ability (PTA) is equal to half of the Estimated Breeding Value (EBV) as a cow only passes on half of her genes to her progeny. EBV's are used in the C.O.W.

A late calver will produce less milk, is less likely to stay in the herd and may have been difficult to get in-calf.

The hybrid vigour effect is the extra gain in performance for a trait above the parent average where an individual is crossbred.

**Note: C.O.W. is only available for Spring Calving herds with a minimum of 3 milk recordings*

An individual effect is a permanent influence over an animal's performance due to an environmental consequence. E.g. a cow with one blind quarter will have a lower milk yield but will not pass this onto her daughters.

Top Tip! Record essential data to improve the accuracy of your herd's C.O.W. 7

Record Events

Data Recording

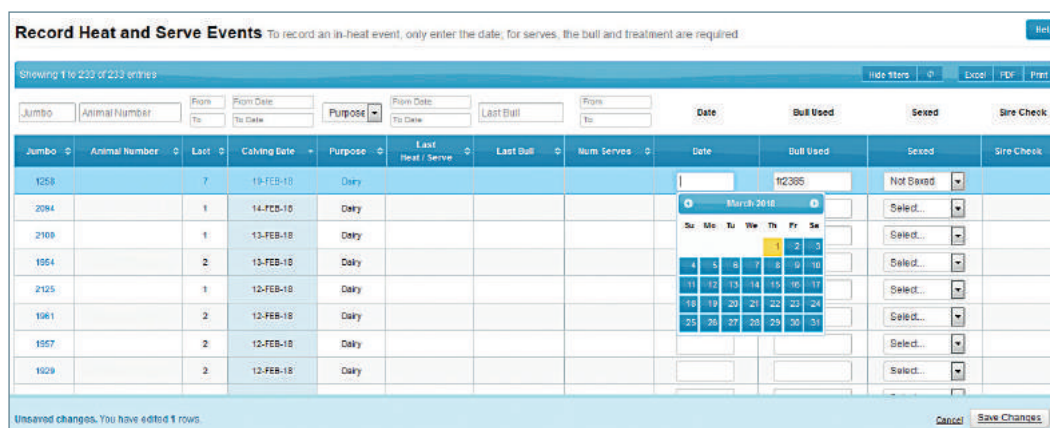

Recording data on your animals is vital for generating accurate EBI's. The completeness and effectiveness of your management reports increases with the more data that you record. You will then be better equipped to make informed breeding decisions when selecting the next generation of breeding stock.

Record Heat & AI/Serve

Heat & AI/Serve data is used to provide you with expected calving or repeat serve dates for management purposes. This data is also used to calculate gestation length and is used to generate your herd's fertility reports.

For herds using an AI technician, AI data is received from your technician's handheld.

Enter the Insemination date along with the bulls **AI Code** Or Enter the **Full Tag Number or Short code/Jumbo** of your stock bull.

Record Heat and Serve Events To record an in-heat event, only enter the date, for serves, the bull and treatment are required

Showing 1 to 232 of 232 entries

Record Pregnancy Diagnosis

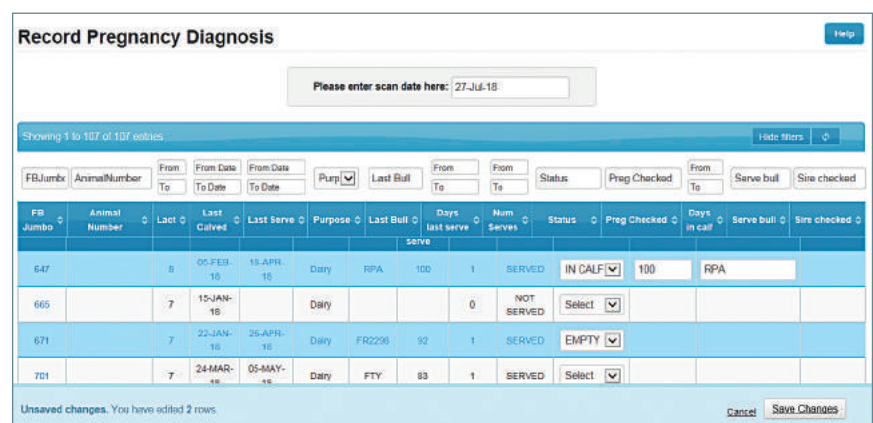

Recording scan results will verify expected calving dates for your herd. Where serves are not recorded farmers can record the approximate number of days in calf as given by the scanning technician.

Enter date of scanning

Enter scan result:

- In Calf
- Empty
- Twins

Enter number of days in calf on the date of scanning.

Record Pregnancy Diagnosis

Please enter scan date here: 27-Jul-18

Record Events

Record Health and Disease Events

To improve the accuracy of the Health sub-index it is important to record health and disease information on your animals. Mastitis, lameness, scour, pneumonia, retained placenta and much more can be recorded here.

If you have an animal with a suspected genetic defect you can record it here, by clicking on the link.

Jumbo	Animal Tag	Birth Date	Sex	Last Event	No. of Events	Event Date	Event	Quarter / Leg Affected	Reason	Treatment	Fatal
72		06-APR-11	F				Lameness (V)	LB RB LF RF	Reason...	Select...	
80		05-FEB-07	F				Select...				
96		15-FEB-07	F				Select...				
209		03-MAR-12	F				Select...				

Record Dry-Off

Dry off Dates must be recorded for a cow to have a valid lactation. This ensures that a cow's lactation details are included in Annual Milk Recording Reports, Sales Catalogues, Pedigree Certs and genetic evaluations.

To record dry-offs, simply put the date of the dry-off in at the top of screen, select dry off for each cow dried on that date and press save changes.

Jumbo	Animal Number	Lactation	Calving Date	Dry Off Date	Days in Milk	Expected Calving Date	Select
647		6	05-FEB-18		172	25-JAN-19	Dry Off
665		7	15-JAN-18		180		Dry Off
671		7	22-JAN-18		186	02-FEB-19	Dry Off

Record Birth Events

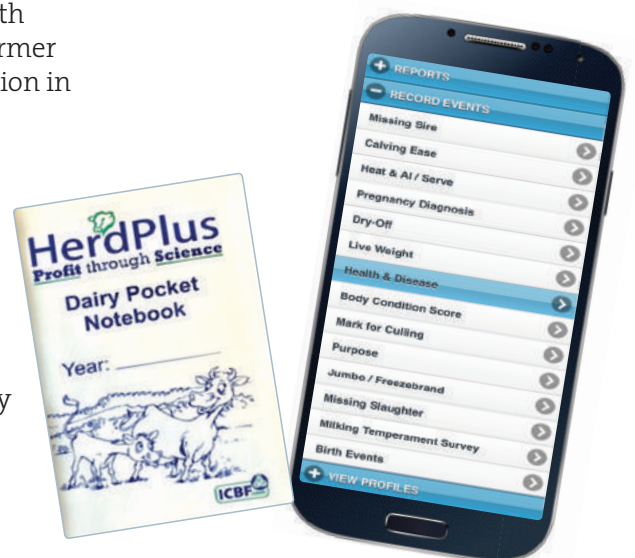

Data collected from various birth events impact on a sire's calving difficulty proof and increases reliability for that trait. Calving surveys, Malpresentation, Birth Size, Calf Vigour, Birth Weight, Birth Measurements can all be recorded on the **Birth Events Screen**. Farmer recorded birth events have been largely responsible for the reduction in calving difficulty that has been achieved in the last 10 years.

Record on the go

Dairy farmers can record even more events through their Dairy HerdPlus membership. The data that you record will improve the reliability of your herd's indexes as well as increasing the accuracy of the various management reports & profiles, provided to you through your HerdPlus membership.

Farm Events can be recorded on your pre-printed HerdPlus pocket notebook and then be recorded online.

Dairy Cow Report

The Dairy Cow Report enables you to critically analyse the performance of every dairy cow in the herd.

Clearly identify every aspect of your cow's performance by looking at her:

1. Ancestry.
2. Calving & Fertility Details.
3. EBI Sub-Indexes.
4. Milk Production Performance.

This report can be used as an aid for breeding & culling decisions.

EBI Report

The EBI report details your herd's performance in terms of overall EBI and each of the seven sub-indexes which will enable you to breed the most profitable animals for your herd.

See how your herd compares to the National Average by lactation.

Dairy Calving Report

The Dairy Calving Report allows you to assess the calving performance of your herd.

View the breakdown of your herd's:

- Calving's each month.
- Calving Survey data.

(b). Top 5 Key Performance Indicators (KPI's)			Btm. 5%	Top 5%
1. Calving Interval (days) Average number of days between successive calvings for cows calved during the period. (125)	Your Herd: 375 days	Nat Avg: 391 days	444 days	363 days
2. Spring 6 Week Calving Rate Number of cow/heifers calved within the first 6 weeks (122) as a proportion of all cows calved during the Spring (151) Note: Serve data used to calculate start of 6 week calving period (25/01/2017). Assumes a 281 day gestation period.	81%	63%	23%	89%
3. Calves per cow per year³ Number of live calves at birth (147) that were born to eligible cows (148)	0.99	0.91	0.68	1.02 calves per cow
4. Females not calved in Period Number of cows in the herd on 30/06/2017 that did not have a calving in the period, (0) as a proportion of eligible cows. (148)	0%	7%	23%	0%
5. Current Replacements rate Number of 1st calving cows on 30/06/2017 (25) as a proportion of eligible cows. (148)	17%	21%	Not Applicable	Target 18-22%

- Benchmark your herd for Key Performance Indicators (KPI's) such as Calving Interval and Six Week Calving Rate.
- Compare your herds figures with the National Average and Top 5%.

Fertility Reports

The Weekly and End of Season Fertility Reports summarise the fertility performance of your herd by looking at the calving data and submission rates at key points in the breeding season.

View the number of spring dairy calving's in your herd on a given year, with key calving dates and patterns outlined.

	Start Calving	Median Calving ¹	Spring Dairy Calving Pattern	
Cows	08/01/2018	07/02/2018 (31 days)		
Heifers	16/01/2018	09/02/2018 (25 days)	Week 3	25 (26%) 53%
Herd	08/01/2018	09/02/2018 (33 days)	Week 6	63 (64%) 80%
¹ Date on which 50% of cows/heifers have calved as % of total calvings on report date.			Week 9	87 (89%) 92%
Total Dairy Calvings		98		
Total Dairy Calves Born		100		

(c). Key Performance Indicators (KPI's)			Btm. 5%	Top 5%
Days since MSD: 95 Cows, 94 Heifers	Your Herd	Nat. Avg.		
1. 21-day Submission rate Cows/heifers submitted for mating within 21 days of MSD (127 cows/ 68 heifers) as a percentage calved up to 21 days after MSD (181 cows) (dairy heifers > 11 months (7))	Cows: 90%	66%	19%	89%
	Heifers: 93%	73%	23%	99%
2. 42-day Submission rate Cows/heifers submitted for mating within 42 days of MSD (138 cows/ 88 heifers) as a percentage calved up to 42 days after MSD (181 cows) (dairy heifers > 11 months (7))	Cows: 98%	83%	45%	86%
	Heifers: 96%	82%	34%	99%
3. Cows calved >30 days and not bred % of cows calved greater than 30 days at MSD (121 cows) and not yet submitted within 21 days of MSD (32 cows)	Cows: 4%	27%	75%	5%

(a) Calving & Fertility Data			Current & Predicted Spring Calving Pattern
Cows	Maiden Heifers	Herd	
Mating Start Date	18/04/2017	19/04/2017	18/04/2017
Last Serve Date	30/07/2017	16/06/2017	30/07/2017
Breeding Season	14 wks + 5 days	8 wks + 2 days	14 wks + 5 days
Total Serves	249	91	340
Animals Served	141	69	210
Serves/Conception	1.9	1.4	1.7

Measure your herd's fertility with the national average & top 5% across a range of Key Performance Indicators.

See your herd's current & predicted calving pattern.

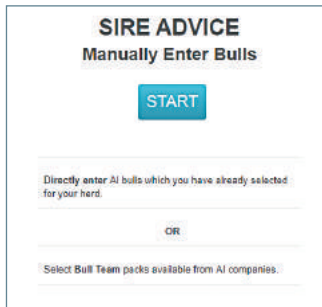

(g) Action List - Cows not yet served or confirmed not in calf						
Jumbo	Animal number	Lact	Calving Date	Days Calved	Serves	Notes
1163		7	28/01/2017	361	2	

Your herd's Action List identifies cows not yet served or confirmed not in calf.

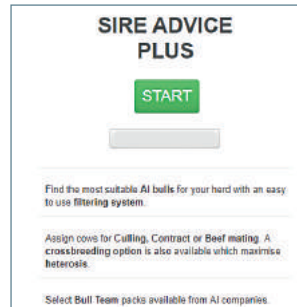

Sire Advice

Sire Advice allows the user to select bulls they wish to use for the breeding season and match these bulls to cows to maximise EBI, improve and reduce variation between milk and fertility and avoid inbreeding.

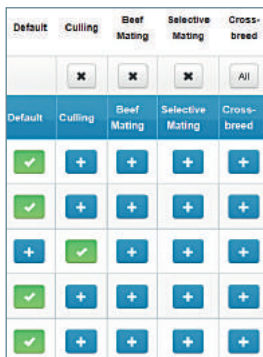

Manually enter bulls option skips the female and bull selector page.

Sire Advice Plus allows for selections to be made for the females.

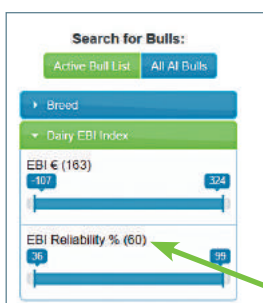

The progress bar above shows which page the user is on while running Sire Advice. This can also be used to jump back pages by selecting the button below each page title.

Female Selector

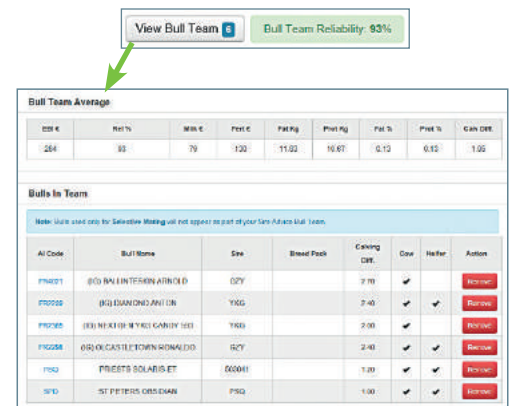

- Females can be selected for culling, beef mating, crossbred mating and selective mating using the tick boxes.
- Females selected for culling and beef mating are then excluded from the allocation.
- The females marked for crossbreeding are then allocated to bulls to maximise heterosis.

Female Selections on Screen: Default: 227 | Culling: 6 | Beef Mating: 0 | Selective Mating: 0 | Cross-breed: 0

Bull Selector

1. Select bulls from either the Current Active Bull list or all AI Bulls.
2. As you use the filters to refine your selection, the bulls on the screen will change.
3. Click on 'Select Bull' to add the Bull to your Bull Team.
4. Note the figures listed in brackets are your herds average EBI's as per your recent EBI report.

Select the magnifying glass to compare bulls in detail against each other and your herd average figures.

	MY HERD AVERAGE	CHQ (G) CACANODE HAROLD	PSQ PRIESTS SOLARIS-ET
Breed		HO	JE
EBI (€)	163	223	234
Rel (%)	60	96	93
Milk (€)	52	80	65
Fertility (€)	71	81	65

Sire Advice

If 'Manually Enter Bulls' is selected on the home screen it takes you to this point. This is where users will directly enter bulls. This screen also gives you the ability to add bull teams currently available from AI companies.

Manually Enter Bulls

Record manually selected bulls - (Optional)

Select AI Company: **AI Company** (dropdown menu open showing: PROGRESSIVE GENETICS, DOVEA AI, EUROGENE AI, BOVA, MUNSTER AI)

Bull Teams: Bull Team (dropdown) **Select Bull Team** (button)

Showing 1 to 1 of 1 entries

The **Straw Allocation** screen allows the user to change the percentage usage or the number of straws for each bull. There is a separate Straw Allocation screen for cows, heifers, crossbreeding cows and crossbreeding heifers depending on the selections made in the Female Selector.

Straw Allocation 1 of 2 - Cows

Choose straws for cows. For heifers go to next screen. **Help**

Allocate By: Usage (%) Usage: 100 % Straws: 67 Total Cows: 67 **View Bull Team** Bull Team Reliability: 91 %

Showing 1 to 4 of 4 entries

Bull Details			EBI Details		Semen Details		Reset Usage
Code	Bull Name	Sire	EBI €	Rel %	Pedigree Status	Proof Source	Allocate for Cows
FR4021	(IG) BALLINTESKIN ARNOLD	GZY	311	58	PED	GS	25.37
FR2298	(IG) OLCASTLETOWN RONALDO	GZY	297	62	PED	GS	25.37

Sire Advice results shows the allocation for each of the cows in your herd. 3 bulls are proposed for each female. The 'Detailed with Sub Indexes' tab and the 'Detailed with Traits' tab both show the expected progeny performance, as a result of the Bull 1 mating. This screen can be converted to Excel, using the Excel button in the top right corner.

Send Sire Advice results to handheld devices **Help**

Your sire advice selections have now **Saved** successfully. Please select **Send Now** for your sire advice selections to be sent to AI technician handhelds and Breeding Chart for printing. Select **PDF** to view the PDF version of your selection and results.

PDF **Send Now**

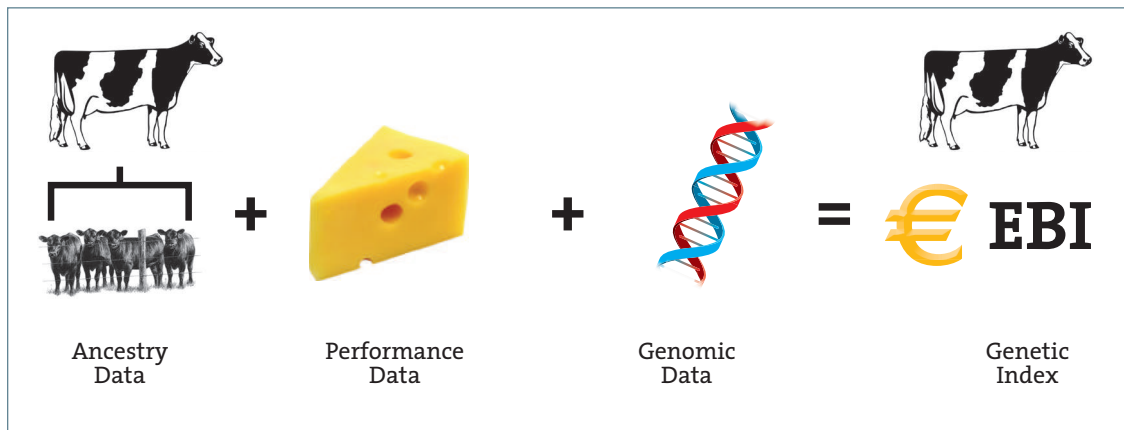

To have these selections on your **Herd Plus Breeding Chart** and AI technician's handheld select **'Send Now'**.

Top Tip! Link your contract reared animals back to your herd to ensure they are visible on your Profiles, Reports and Sire Advice application.

What is Genomics?

Genomics is breeding using DNA (Genotype) to help better predict how well an animal will perform in the future. DNA is passed from parents to offspring and is therefore central to breeding. The DNA (hair sample) profile of an animal is analysed and compared to the DNA profiles of older proven animals also known as the reference population and looks for similarities. Performance data, Ancestry data and Genomic data are combined on the animal itself generating a more accurate prediction of the animal's genetic make-up (Economic Breeding Index).

Benefits of Genotyping Dairy females

- Replacements:** Identify the best heifers to breed as replacements.
- Genomic Evaluation:** Animal has genomics included in its Economic Breeding Index which is a better prediction of the true value of an animal's genetics.
- Parentage Verification:** Confirms parentage (assuming parents are genotyped).
- Reliability:** Increases the EBI reliability % figures even before the animals have produced any offspring.
- Genomic Selection:** Improves the reliability of genomic selection by increasing the number of animals in the reference population.

How can I Genotype?

To avail of this service, you can order hair cards for DNA collection through the self-selection screen by logging into your HerdPlus account and selecting 'Services' – 'Genomic Services' – 'Place Order'. All orders can be tracked using the genotype tracking screen.

How much does it cost?	
Male animals	€50
Selective Females	€30
Genotype a group of females at a discounted price of	€22

Testimonials

Helping our members succeed

We work with over 26,000 HerdPlus members on their journey to make the most profitable and sustainable breeding management decisions for their business. The information provided to Dairy HerdPlus members has enabled them to make great strides in Key Performance Indicators (KPI's) in recent years. These KPI's are strong signals for greater efficiency, sustainability and profitability at farm level and Dairy HerdPlus members are vastly outperforming Non HerdPlus herds in this regard!

Key Performance Indicators: Dairy HerdPlus vs Non HerdPlus Herds		
	HerdPlus	Non HerdPlus
Average Herd EBI	€97	€73
Average Calving Interval (days)	383	394
Average 6-week Calving Rate	68%	58%

Table 2 Key Performance Indicators: Dairy HerdPlus vs Non HerdPlus herds (September 2018 figures)

What our members are saying

"We like **C.O.W.** as it combines both the genetic potential (EBI) and the actual milk recording performance of each cow. It's a fantastic feature of the HerdPlus service that allows us to identify the cows that are passengers in our herd"

Kevin & John Croke,
Co. Tipperary

"We have **Genotyped** all our dairy females each year since 2011. We are delighted with the service. It has confirmed the parentage and helped immensely with our breeding decisions".

Tom & Kathy Kearney,
Co. Cork

"Having all the data with you while on the farm has proved invaluable. Thanks to the **HerdPlus App** we have been able to record heat and AI serves on the spot".

David & Andrew Ferguson,
Co. Donegal

"**Sire Advice** allows us to pick a team of high EBI genomic bulls and then match the most suitable bull to each cow with the aim of maximising a balanced EBI gain across our herd while minimising inbreeding. The data is uploaded to the handheld of our technician and it works a dream. We wouldn't be without it at this stage".

Salesian Agricultural College,
Pallaskenry, Co. Limerick

"**The HerdPlus Fertility & Calving Reports** greatly help us in achieving submission & calving rate targets for our herd. These are crucial KPI's for farm profitability. The **EBI Report** shows the areas we can make improvements in our herd for future genetic gains".

Alan Jagoe,
Co. Cork

HerdPlus App

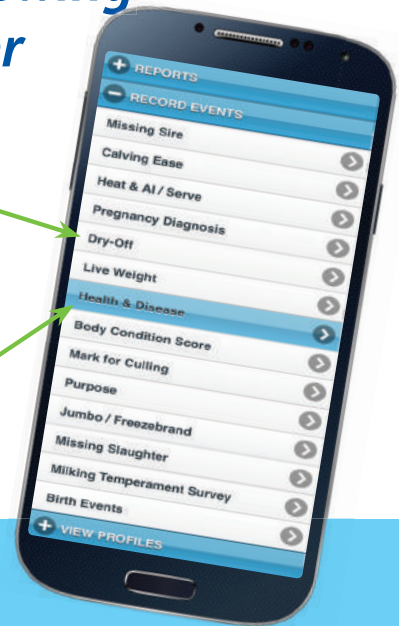

We are delighted to introduce our new **HerdPlus Mobile App**

Recording events and viewing animal profiles has never been so easy!

Instant access to a wide range of HerdPlus services

- Your latest HerdPlus Reports.
- Record essential data anytime, anywhere e.g. dry-offs, serves, lameness and mastitis.
- View Profiles for live, up to date information e.g. EBI and Fertility.

Download for FREE today!

New Farmer Screens available at www.icbf.com for all farmers participating in Milk Recording

Milk Recording

New Profiles

- SCC results greater than 200 are highlighted
- Easy to identify high SCC 'Problem Cows'
- Make more informed management decisions
- Accessible anytime through the ICBF Web App
- Printable and downloadable to excel or PDF

Milk Recording SCC Profile

- SCC history for each cow
- View up to 10 previous SCC Results
- Select specific cows for antibiotic dry cow therapy

Milk Recording Tests Profile

- View your **latest milk recording test** results
- View all **previous milk recording test** results
- Access a specific cow's results quickly & easily
- No longer a requirement to store paper reports
